

Introducing Language Accelerator

Helping Your Child Make Measurable Progress in Language Development

LANGUAGE ACCELERATOR IS AN EVIDENCE-BASED LANGUAGE DEVELOPMENTAL TOOL designed with your child in mind.

What It Is

Language Accelerator is a technology-based personalized language intervention program designed for students in PreK and Elementary school with deficits or delays in any area of language. It is an intervention program that is used by both speech and language pathologists (SLPs) as well as educators in a classroom setting or private practice setting.

How It Works

Language Accelerator begins with a quick placement assessment that identifies your child's particular strengths and areas of need across six key language domains (semantics, syntax, morphology, phonology, pragmatics, and symbolic representation), as well as articulation. After the placement assessment, the program offers personalized, engaging lessons through interactive videos and activities.

Track Progress Together

The SLP and teacher can work together to analyze and share data about your child's progress with you, by measuring growth on skills, mastery of skills, time spent practicing, and more.

Ways to Extend Learning at Home

Some families may choose to extend practice at home through the student log-in or through the supplemental (printable) resources.

Questions?
